## Abstract of the Disclosure

An in-wheel motor system, wherein the nonrotating side case of a motor and the knuckle of a motor
are connected to each other by a buffer mechanism 10
having plates 11 and 12 interconnected by a linear guide
15 with springs composed of a linear guide 13 consisting
of a linear bearing 13A and a rod 13B and spring members
14 and 14 moving in the vertical direction of a vehicle
and integrated with the linear guide 13 and a damper
16 moving in the vertical direction of the vehicle and
interconnecting the plates 11 and 12. Thus, the motor
can be securely float mounted to a part around the wheel
of the vehicle and the buffer mechanism 10 can be easily
assembled.
